Resilience and Disaster Management in the Indian Ocean: Putting the "Bounce" into Managing Disasters in the Coastal Zone

Pam Rubinoff, Coastal Resources Center, University of Rhode Island

Resilience is...

 Derived from its Latin roots 'to jump or leap back', is the ability to recover from or adjust easily to misfortune or change

 Capacity of a system to absorb disturbance and reorganize while undergoing change so as to still retain essentially the same function, structure, and feedbacks – and therefore the same identity (www.resalliance.org)

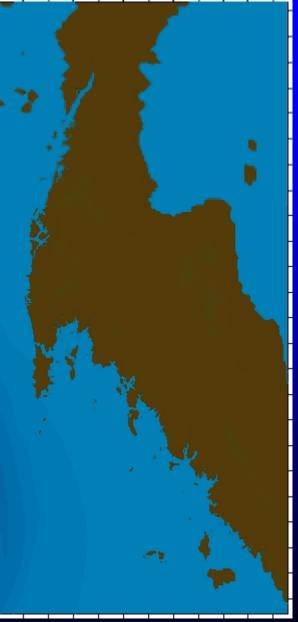

Absorb shock – Bounce back – Adapt

SUSAID ASIA S **USGS** Developing an "End-to-End" Tsunami Warning System for the Indian Ocean The U.S. Indian Ocean Tsunami Warning System (IOTWS) program is providing technical assistance to the region using an integrated, "end-to-end" approach. In addition, the approach is multi-hazard in that it VACUATION simultaneously addresses tsunami hazards ROUT and a number of other critical coastal hazards such as cyclones, sea swells floods, and earthquakes. www.iotws.org Regional National local Hazard Detection Local Preparedness Warning Warning and Forecast Formulation Dissemination and Response

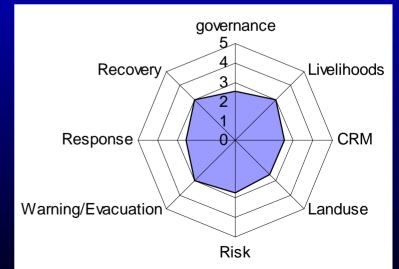

Assessing Reslience

Elements	Benchmark issues	Status
Governance	Plans	
	Collaboration	-
	Services	
	Resources	-
Socio-economy & Livelihoods	Diverse Programs	
	Technical and Financial Resources	
	Social Networks	
Coastal Resource Management	Institutions	
	Habitat Protection	
	. Restoration	
Land use & Structure	. Landuse plans	
	. Structures	
	. Monitoring and implementation	
	. Redevelopment	
Risk Knowledge	. Risk Assessment	
	. Use of information	
	. Risk communication	-
Warning and evacuation	. Warnings	
	. Systems disseminate warnings	-
	. Evacuation	
	. Outreach	-
Emergency response	Incident Command System/protocols	-
	Emergency Facilities	
	Drills and training	-
Recovery	Disaster recovery process	
	Disaster recovery plans and process	
	(short and long term)	

It Takes a Village!
